DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 101-116, 123-202, drawn to a semiconductor device, classified in class 257, subclass 300+, 381.
 - II. Claims 203-223, drawn to a product by process, classified in class 438, subclass 647, 657, and 570.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions Group I and Group II are related as process of making and process of using the product. The use as claimed cannot be practiced with a materially different product. Since the product is not allowable, restriction is proper between said method of making and method of using. The product claim will be examined along with the elected invention (MPEP § 806.05(i)).
3. This application contains claims directed to the following patentably distinct species of the claimed invention:
 - a. Claims 101-116, 123-128, 194 and 195 is a transistor having S/D adjacent to the gate
 - b. Claims 129-142, 156-166 is a transistor structure having the S/D at the top and bottom of the gate.
 - c. Claims 143-155, 167-193, and 196-202 is a semiconductor structure having at least two epitaxial silicon layers.

Art Unit: 2814

4. Inventions Group a, b and c are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because both the combination and subcombination are presented and assumed to be patentable, and it is evidence that the semiconductor structure having at least two epitaxial silicon layers is patentable by itself. In addition, the subcombination has separate utility such as but not limited to S/D region, a conductor, or gate conductor.
5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
8. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to

Art Unit: 2814

be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
